

## Data sheet

# Electronic Pressure Switch

## Type MEP

**MEP 2200 and MEP 2250 versions:**

- Dual output  
 Output 1: Switch output  
 – Hysteresis 1% FS  
 – Time constant 1 mS  
 Output 2: Analogue output  
 – Ratiometric or absolute voltage output

**MEP 2600 and MEP 2650 versions:**

- Single output  
 Output 1: Switch output  
 – Hysteresis 1 – 8% FS  
 – Time constant 8 – 512 mS

**The series is available in 2 versions:**

- MEP 2200 and MEP 2600 – without integrated pulse-snubber
- MEP 2250 and MEP 2650 – with integrated pulse-snubber

The integrated pulse-snubber offers a high degree of protection against cavitations and liquid hammer, and the well thought out design results in excellent vibration stability and an exceptional robustness.

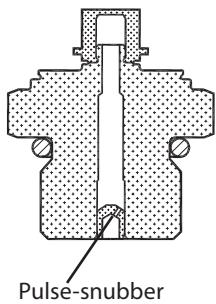

The high degree of EMI protection equips the electronic pressure switch to meet most requirements.

**Features**

- Designed for use in severe OEM applications
- Excellent long term stability with zero drift
- No leakages due to fully welded design
- Wetted parts made of stainless steel
- For medium and ambient temperatures up to 125 °C
- Dual output versions with switch function and an analogue output signal: 0 – 5 V, 1 – 5 V, 1 – 6 V, 0 – 10 V, 10 – 90% ratiometric voltage as additional output
- Switch versions with customized hysteresis and time constant
- A wide range of pressure and electrical connections
- EMC protection up to 100 V/m

**Approvals**

UL 508 recognized  
 ISO 7637 pulse 1-24V

**Data sheet**
**Electronics Pressure Switch, type MEP**
**Pulse-snubber  
in MEP 2250 and MEP 2650**

**Application**

The pulse-snubber protects the sensor element in the event of cavitation, liquid hammer and pressure peaks, which may occur in liquid filled systems with changes in flow velocity, e.g. fast closing of a valve or pump starts and stops.

The problem may occur on the inlet and outlet side, even at rather low operating pressures.

The media viscosity has only little effect on the response time. Even at viscosities up to 100 cSt, the response time will not exceed 4 ms.

**Technical data**
**Performance (EN 60770)**

	MEP 2200 and MEP 2250	MEP 2600 and MEP 2650
	Dual output (Switch and Analogue - output)	Switch output (Switch - output)
Switch Hysteresis	1% FS	1 – 8% FS
Switch Time delay	1 mS	8 – 512 mS
Accuracy (incl. non-linearity, hysteresis and repeatability)	2% FS	2% FS
Thermal accuracy	< ±0.15% FS / 10K	< ±0.15% FS / 10K

**Overload and burst pressure – without pulse-snubber**

Nominal pressure [bar]	10	16	25	40	60	100	160	250	400	500	600	1000*	1600*	2200*

	Enclosure	AISI 304 or plastic
	Pressure connection	17 – 4 PH
	Electrical connection	see page 7

## Configuration codes for MEP 2200 and MEP 2250

Code 1	<p>Switch state high low Set point Hysteresis 1% FS</p>	<b>NPN – dual output</b> NPN / Switch to ground <ul style="list-style-type: none"> <li>+ Supply</li> <li>Pressure signal (absolute and ratio metric mode)</li> <li>Load</li> <li>- Supply</li> </ul>
Code 2	<p>Switch state high low Set point Hysteresis 1% FS</p>	<b>NPN – dual output</b> NPN / Switch to ground <ul style="list-style-type: none"> <li>+ Supply</li> <li>Pressure signal (absolute and ratio metric mode)</li> <li>Load</li> <li>- Supply</li> </ul>
Code 3	<p>Switch state high low Set point Hysteresis 1% FS</p>	<b>PNP – dual output</b> PNP / Switch to supply <ul style="list-style-type: none"> <li>+ Supply</li> <li>Pressure signal (absolute voltage)</li> <li>Load</li> <li>- Supply</li> </ul>
Code 4	<p>Switch state high low Set point Hysteresis 1% FS</p>	<b>PNP – dual output</b> PNP / Switch to supply <ul style="list-style-type: none"> <li>+ Supply</li> <li>Pressure signal (absolute voltage)</li> <li>Load</li> <li>- Supply</li> </ul>

<sup>1)</sup> NO: At rising pressure ( $P^0 - P^{Max}$ ) when reaching the set point the switch will connect the applied load  
(Switch state change from low to high).

At falling pressure ( $P^{Max} - P^0$ ) when reaching the set point + hysteresis the switch will disconnect the applied load  
(Switch state change from high to low).

<sup>2)</sup> NC: At rising pressure ( $P^0 - P^{Max}$ ) when reaching the set point the switch will disconnect the applied load  
(Switch state change from high to low).

At falling pressure ( $P^{Max} - P^0$ ) when reaching the set point + hysteresis the switch will connect the applied load  
(Switch state change from low to high).

## Configuration codes for MEP 2600 and MEP 2650

Code 5	<p>Switch state ↑ Normally open (NO)<sup>1)</sup></p> <p>high low</p> <p>Set point</p> <p>Hysteresis 1 – 8% FS</p> <p>bar</p>	<p><b>NPN – switch output</b> NPN / Switch to ground</p>
